Our Value Proposition: Proven Success

It is all about the software. Product Savvy Consulting is a software development firm comprised of *PROVEN* high-technology veterans with a focus on providing our clients with a one stop solution for their software development needs. We build software that addresses our customer needs, no more, no less. We maximize developers' productivity by applying a "think before you build" principle. Software is designed first, then coded, then successfully delivered, on time, on budget, with no headaches.

PSC Project Management: Efficient & Effective

Fact: IT projects Fail. That's right. We said it. However, this is exactly what makes our value proposition to you, "valuable." Normal success rates for a software project are below <40%. Software is the engine of our economy, at the root of almost everything we do; we cannot allow projects to fail. Our Project Management (PjM) experts have been around the block more than once, which allows us to avoid potential pitfalls, as well as implement successful and proven PjM methods that exponentially increase your likelihood of success. Our PjMs understand what it takes for projects to succeed, as well as what it takes for projects to fail.

PSC Software Development: From Start to Finish

Accurately build to a "REAL" Need. A successful software project starts with a good design and an actual understanding of what the customer needs. Sounds simple ha? Unfortunately in many instances this is simply not the case. Management is on one page while engineers are on the other. We bring to you our proven track record in planning, building and launching successful high profile software systems, decades-spanning experience in object oriented software design and a real passion for technology and innovation. With strong understanding of our customer and market needs, we provide the link to tie engineers and management together as we rapidly convert software problems into successful software solutions.

Our Commitment

We deliver and we are Agile. We implement the Agile Process, quick, no-nonsense approach to software development. PSC is committed to deliver projects efficiently and effectively, through project status meetings, open access to project schedules and high visibility. We allow team members, as well as managers to understand the project status at any given time, provide input, ideas and share their experience in driving the project forward. We save you time, and time is usually what everyone is short of.

Next Steps

Contact us. So where do we go from here? With all this in mind, just give us a call and let's schedule a meeting. It won't cost you anything and the last thing we want to do is waste your time or ours. After all, your success is our reputation.
